

Datasheet for #sb2972 DN

Recommendations:

Please read the starter kit user manual (at least installation chapter 5), if available, and have a look at the FAQ at <http://www.alpeslasers.ch/alfaqa.pdf>

WARNING: Operating the laser with higher current or voltage than specified in this document may cause damage and will result in loss of warranty, unless Alpes Lasers has permitted to do so!

WARNING: Beware of the polarity of the laser. This laser has to be powered with negative current on the laser contact (= bonding pad, corresponding to the label "laser" on the LLH) and the positive current on the base contact (= submount, corresponding to the label "base" on the LLH). To use with a power-supply ILX Lightwave LDX-3232 or equivalent.

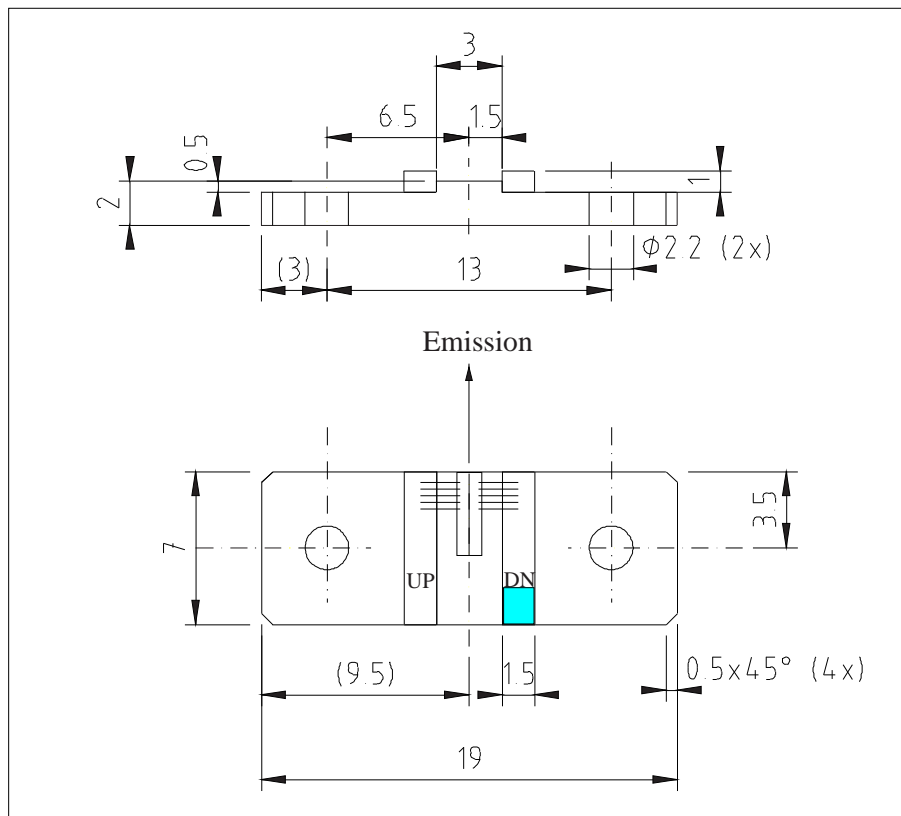

Figure 1: Support mounting for #sb2972 DN (please note that the laser is connected to the DN pad drawn in blue)

Uncoated device

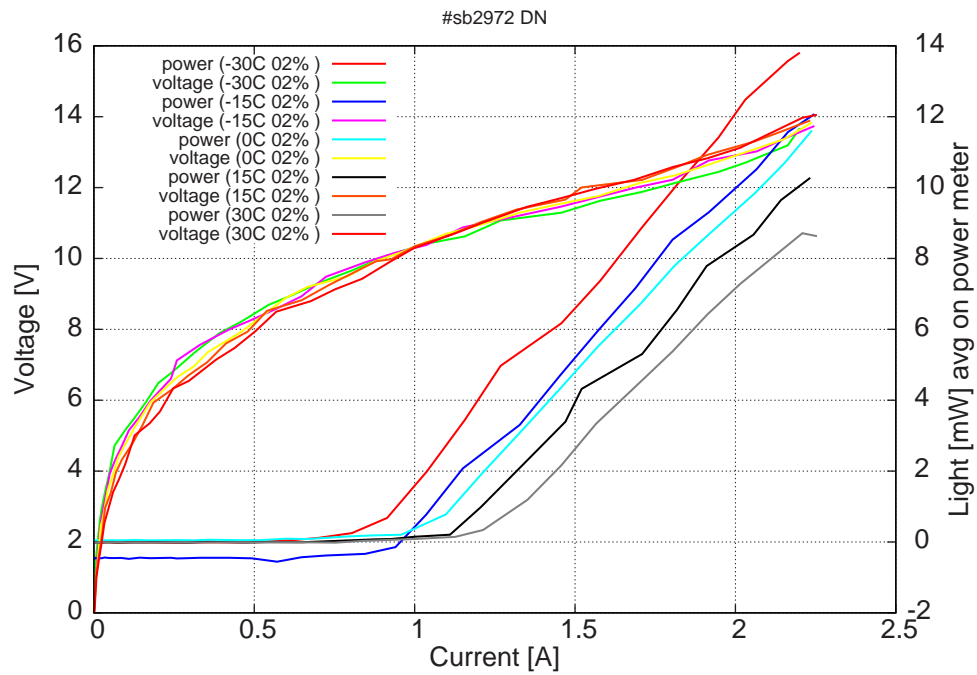

Figure 2: peak voltage and average power vs peak current at 2% duty-cycle (100ns pulses on the laser, $5\mu\text{s}$ period)

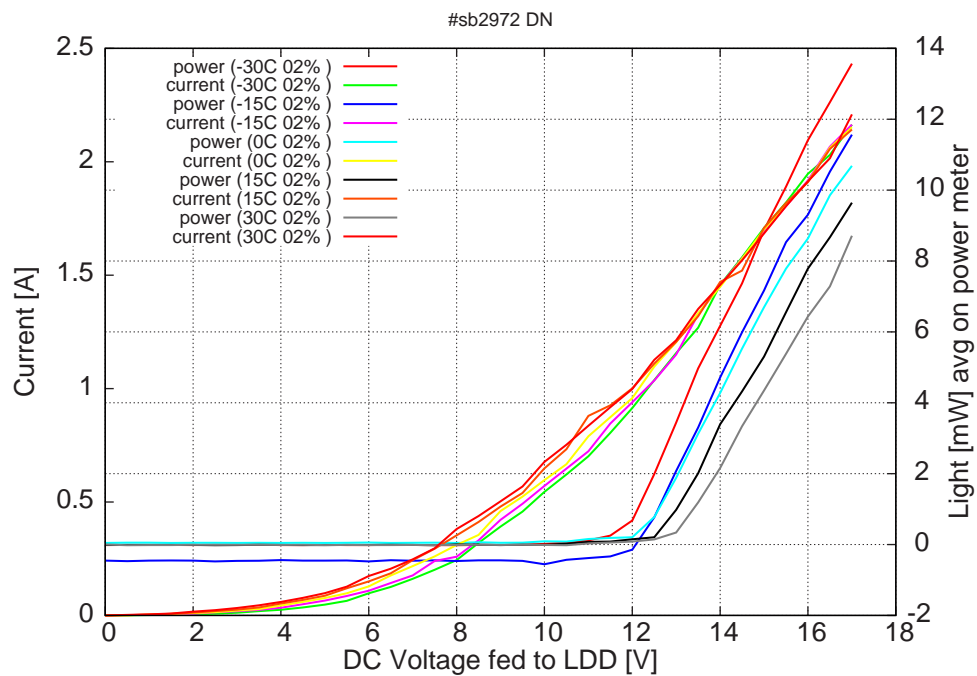

Figure 3: peak current and average power vs LDD voltage at 2% duty-cycle (100ns pulses on the laser, $5\mu\text{s}$ period)

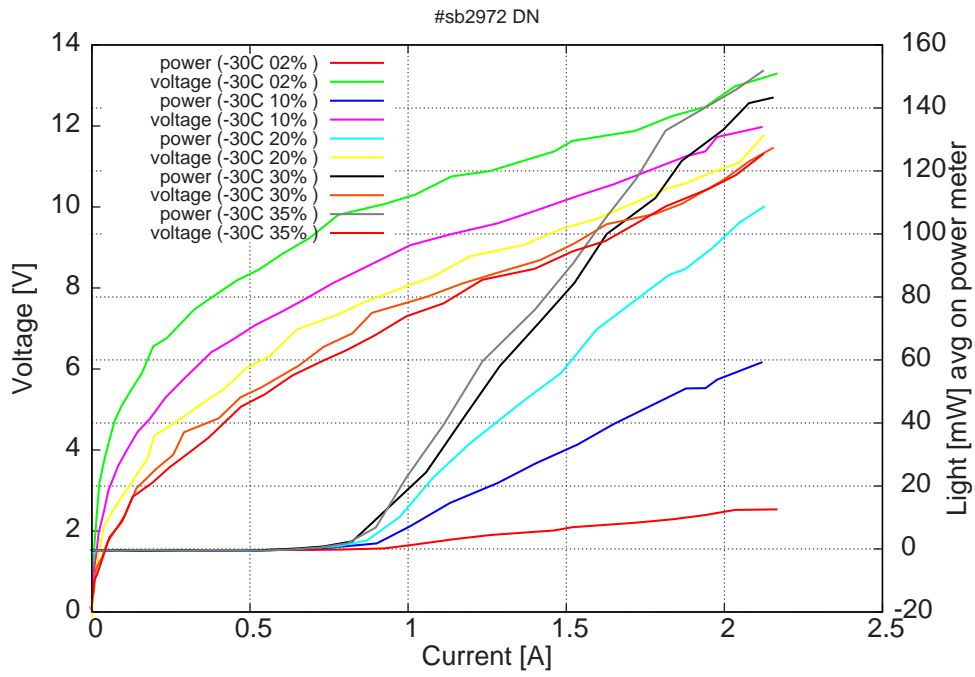

Figure 4: peak voltage and average power vs peak current at -30C for various duty-cycles (100ns pulses on the laser)

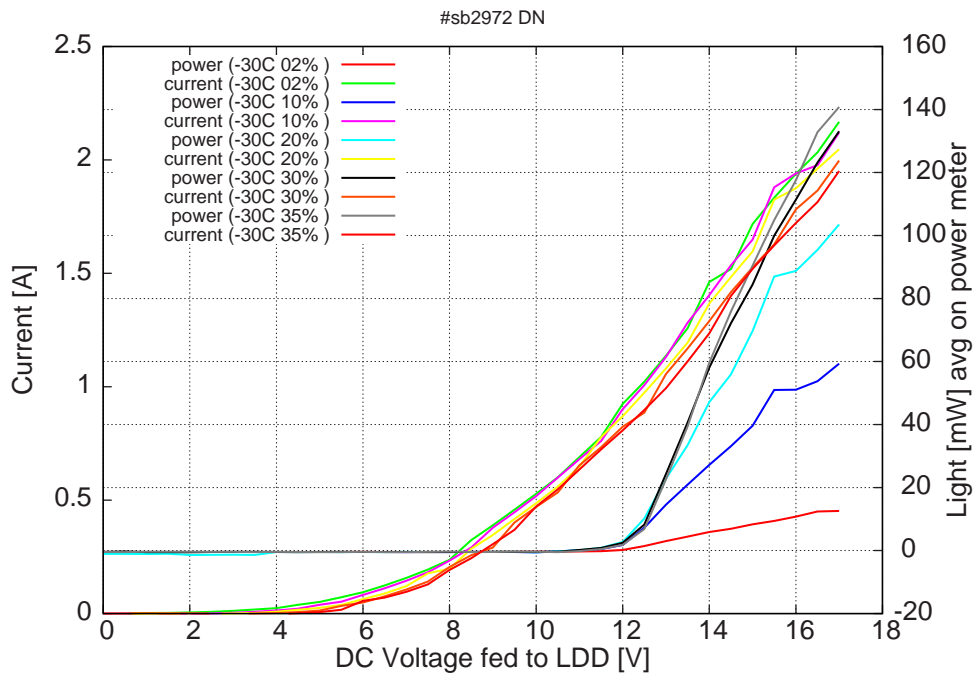

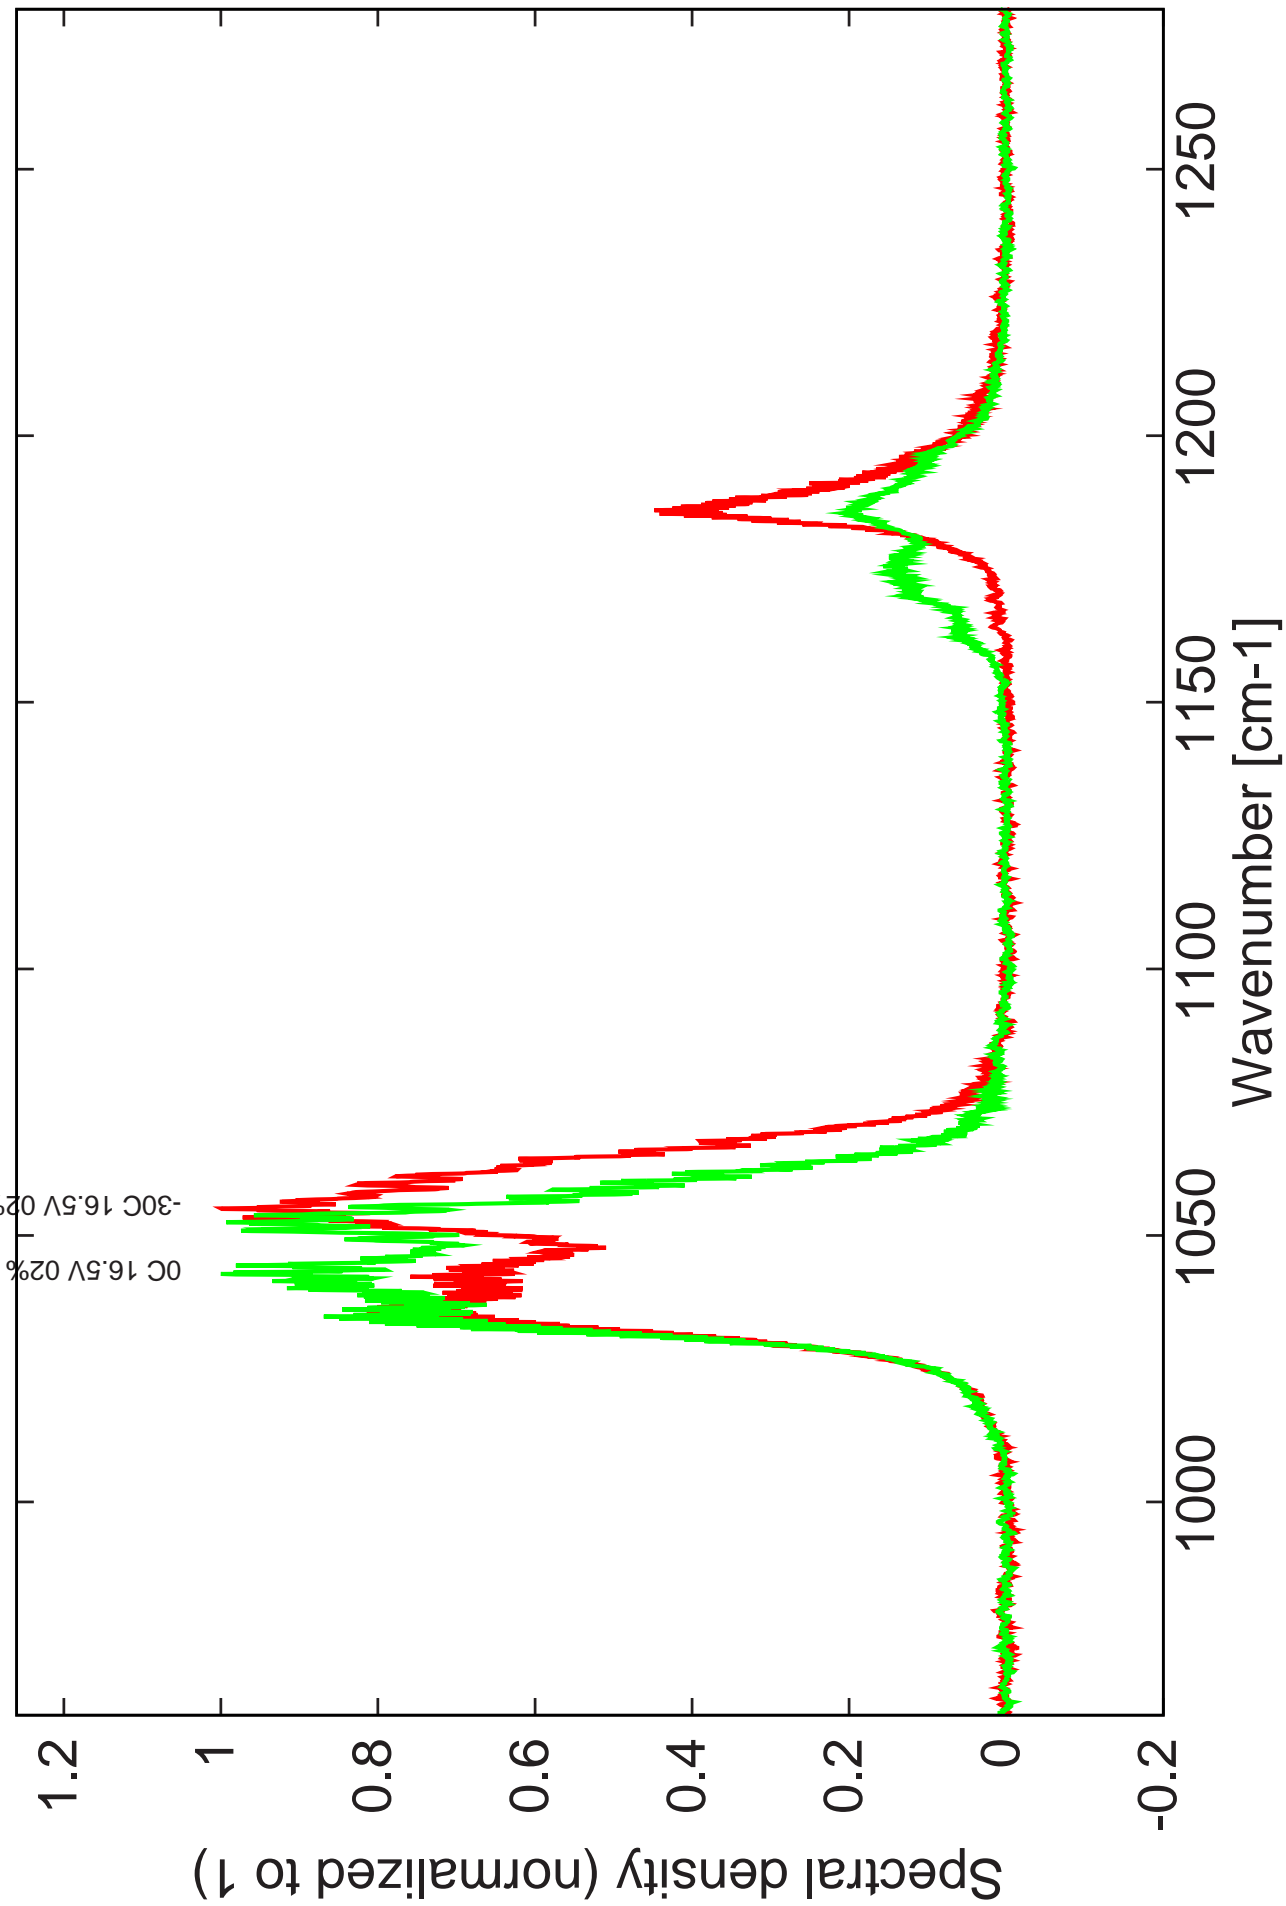

Figure 5: peak current and average power vs LDD voltage at -30C for various duty-cycles (100ns pulses on the laser)

Figure 6: spectra at 2% duty-cycle (100ns pulses on the laser) for the uncoated device

HR coated device

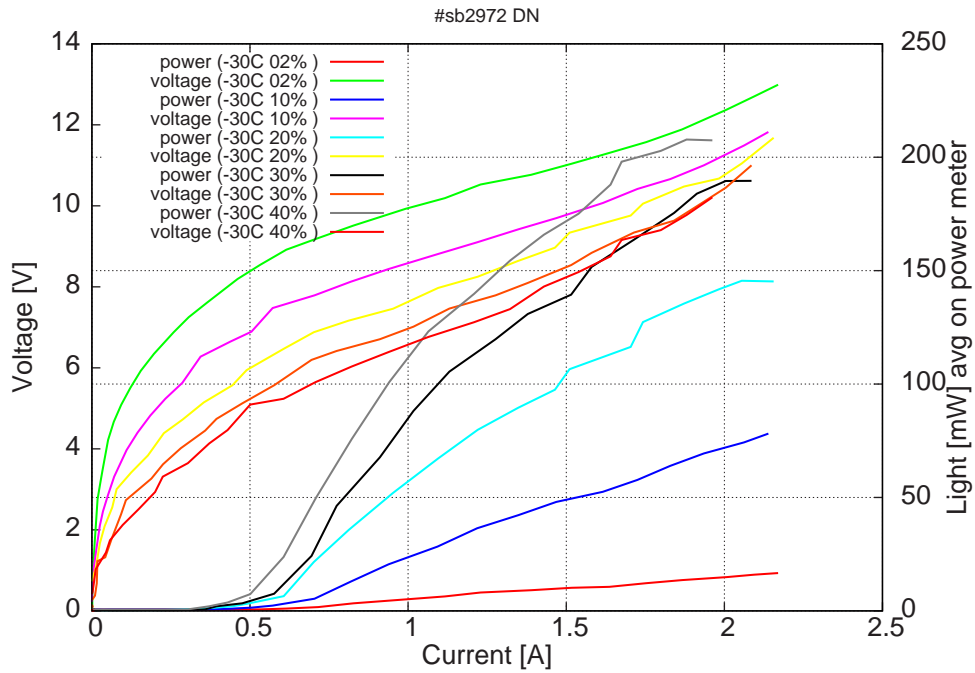

Figure 6: peak voltage and average power vs peak current at -30C for various duty-cycles (100ns pulses on the laser)

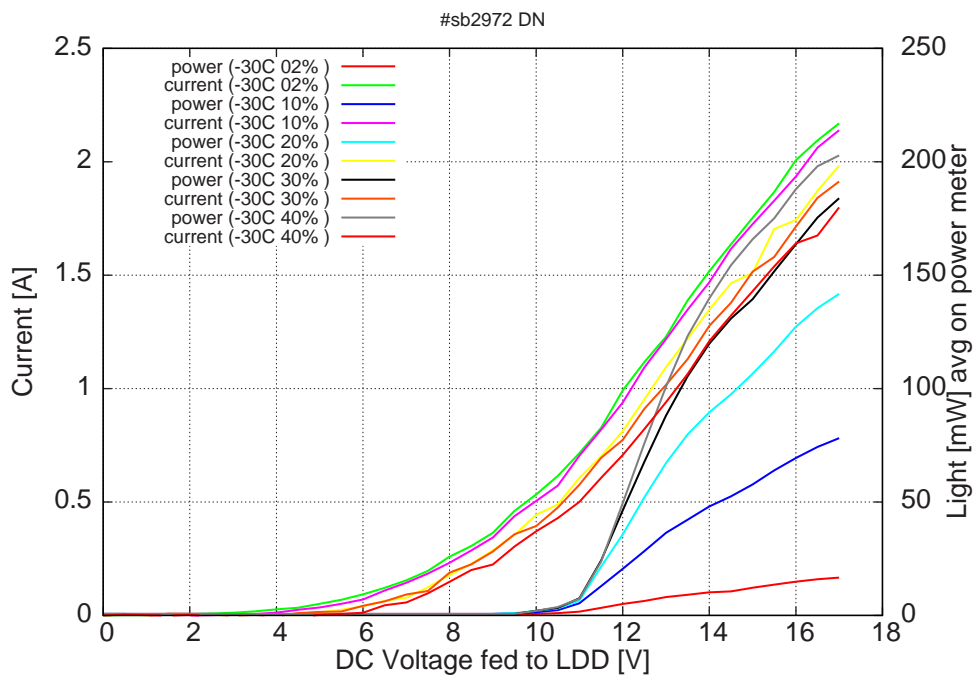

Figure 7: peak current and average power vs LDD voltage at -30C for various duty-cycles (100ns pulses on the laser)

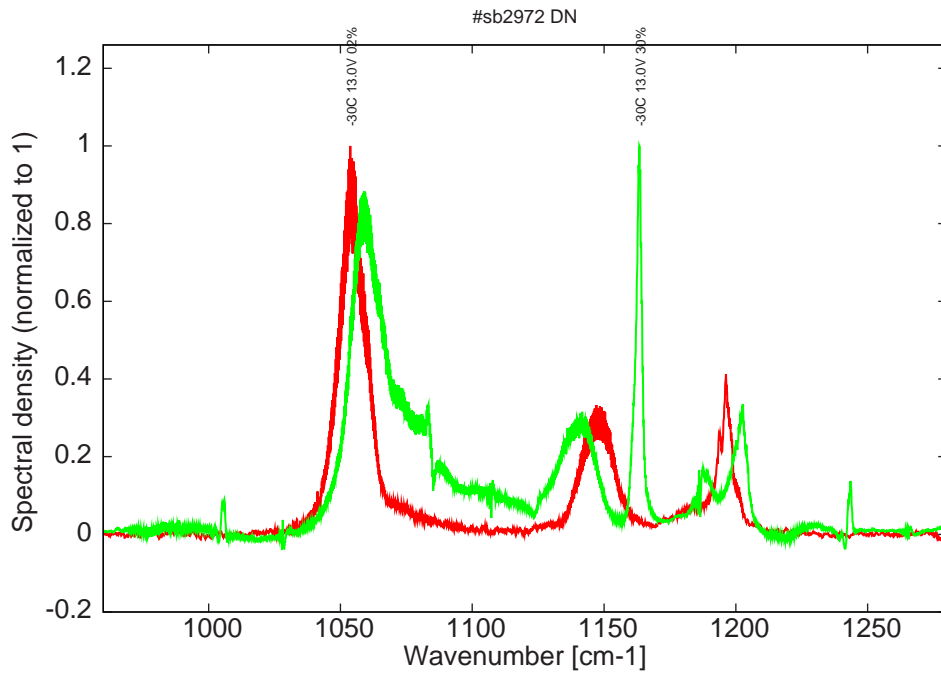

Figure 8: spectra at -30C at 2% and 30% duty-cycle after HR coating (100ns pulses on the laser)

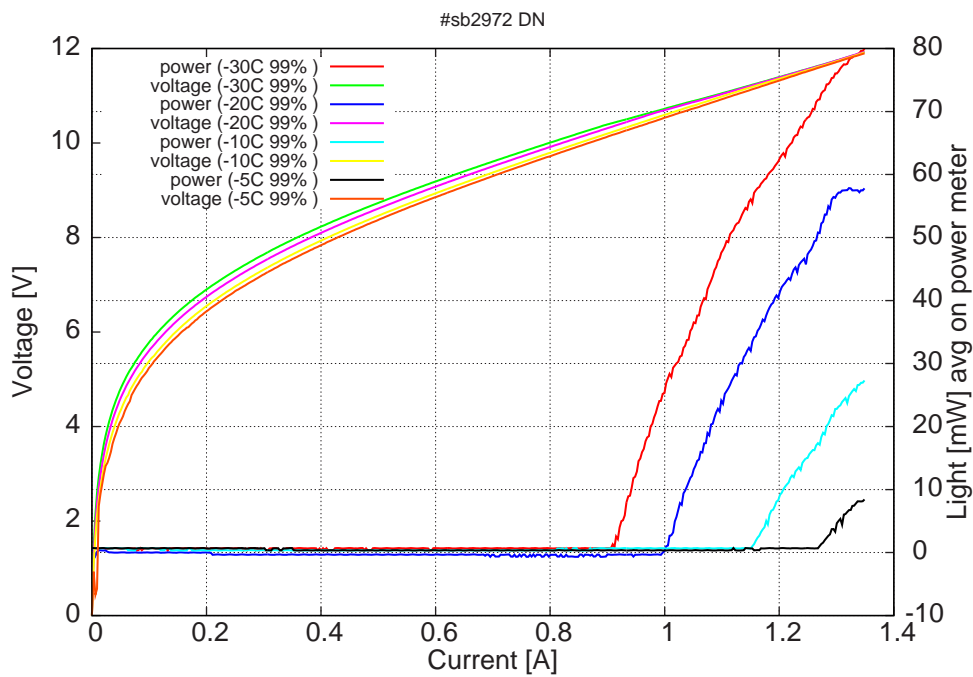

Figure 9: voltage and avg power vs current in continuous-wave operation for the HR coated device
